

Kayanat Ke Chhupe Huve Raaz

Hazrat Mufti Ahmad Khanpuri (db)

Darse Kuran urdu-44 Sure Fatiha se
lipyantaran kiya he.

Bismillahirrahmanirrahim

Alhamdulillahi rabbil aalamin

Tarjuma - tamam tarife Allah ke liye he jo
tamam jahaano ka palne vala he, hamd
isme jinse he, yani tamam tarife is
duniya me Allah ne mukhtalif kisme aur
jinse paida farmayi he, jaise insaan,
jinnat, janvaro ki mukhtalif kisme,
charinde, parinde, har ek ka ek jahaan he,
ek insaano ka jahaan he, ek jinnato ka
jahaan he, har makhluk ka ek alag aalam
he, puri duniya bahot se aalamo ka
majmua he, is matlab ke aitebar se
aalamo ka paalne vala Allah he.

[Maktab Ashraf](#) ye PDF grammer ya bhasa ka adab nahi he. [1]

Baaz hazrat kehte he, jo duniya hame nazar aa-rahi he, iske alava bhi Allah ne bahut se jahaan paida kiye he,

jo hame nazar nahi aa-rahe he, lekin aaj kal ke sciencedano ki khoj ye he ke hamari duniya ke jo chaand, suraj he ye hamari akashganga (Galaxy) he, is duniya ke alava bahut sari akashgangaye (Galaxies) he.

Jis zamin par ham rehte he vo ek aam adami ke map ke mukable me bis arbo-kharbo guna badi he, jab ke suraj zamin se das lakh guna bada he, iske mukable me etaa-kairine naam ka mashur sitara suraj se bhi pachas lakh guna bada he, iske baad betelgeyuj naam ke sitara suraj se tees karod guna bada he, aur vi-vai-

kainis-mejoris naam ka sitare
suraj se ek arab yani 100
karod guna bada he.

Kya aap ko malum he?- Jis akashganga
me ham rehte he us ka naam milky-way
he, hamare suraj aur chaand ko
suryamandal kehte he, isi ko akashganga
kaha jata he, aur hamari sirf ek
akashganga me suraj teen so arab se
jyada suraj mojud he, aur ye akashganga
itni badi he ke agar ham kisi aisi chiz me
savar ho, jo ek second me teen lakh kilo
meter ki duri puri karle, yani ek second
me zamin ke sat chakkar lagane vali ho,
usko bhi hamari akashganga ko par karte
karte ek lakh saal lag jayenge, andaza
huva na hamari akashganga kitani badi
he.

Lekin nahi aavo ham aap ko apni padosi akashganga me liye chalte he, uska naam endromeda he vo hamari

akashganga se double he, yani do lakh saal lag jayenge, lekin ye bhi chhoti he, mesiyar-81 naam ki akashganga se 60 guna badi he, jab ke aisi 1101 hamari akashganga se 600 guna badi he ab samajh me aa raha he Allahu Akbar ka matlab?

Aavo abhi ye silsila yahi khatam nahi huva, jaise sitaro se akashgangae banti he isi tarah akashgangao se cluster (jama hona) bante he, aur jis cluster me hamari akashganga he uska naam virko cluster he, aur sirf ek cluster me 47000 akashgangae he, aur mamla yahi khatam

nahi huva, cluster bhi aapas me milkar super cluster banate he, aur jis super cluster me ham rehte he uska

naam local super cluster he, aur is super cluster me 100 ke karib cluster he, aur is super cluster jaise takriban ek karod super cluster hamari kayanat me maujud he, jo ek bade se jund me mamuli nukto jaise nazar aate he, aur un sab ko ek jaat yani Allah ne banaya he.

Ab zamin ki hesiyat to in sab ke mukable me ek nukte se bhi kam samajhi jaati he, isse Allah ke farman Rabbil Aalamin ka aandaza hota he, hamne to kuchh dekha hi nahi hamari jankari ke aitebar se dekha jaye to kuve ke mendak ka lafza bhi kam padta he, aaj ke sciencedan jab in

sab chizo ki detail batate he to hamari akal kabul karne ko tayyar nahi hoti, samajh me nahi aata ke itni badi kayanat.

Allah is puri kayanat ko banane vala bhi he aur uski zarurato ko pura karne vala bhi he, aur inme se har ek ko kamal tak pohchane vala bhi he, tarbiyat kisi bhi chiz ko ahista-ahista uski inteha tak pohchane ko kehte he, jaise insaan ko bachcha paida huva, to uski tarbiyat ka matlab ye he ke bachpan se lekar ek kamil insan banne tak jitni bhi mehnat ki jati he, usko tarbiyat kehte he, to Allah sare jahaano aur usme jitni bhi makhluq he sab ka palne vala he.
